RE: Notification of Cement Platforms on Mountain Valley Stone's Brown Canyon Quarry

Dear Lynn:

Please be advised that Mountain Valley Stone has built three cement platforms and moved the employee parking area. These platforms serve as a base for a guillotine, a mechanic area and for a temporary shack. The guillotine platform measures 50' x 25' and is sectioned with our other guillotine platform. The platform for the mechanic area measures 45' x 30' and is used to repair machinery and other equipment. The platform for the temporary shack is 16' x 16'. This platform was moved along with the shack from the previous area as shown on the attached map. The parking area has also been moved to the shack area. The platforms and the parking are within our 5 year mine area. These additions to our quarry can be seen on the attached Mountain Valley Stone Surface Facilities Map.

Should you have any questions, please give me a call.

Sincerely,

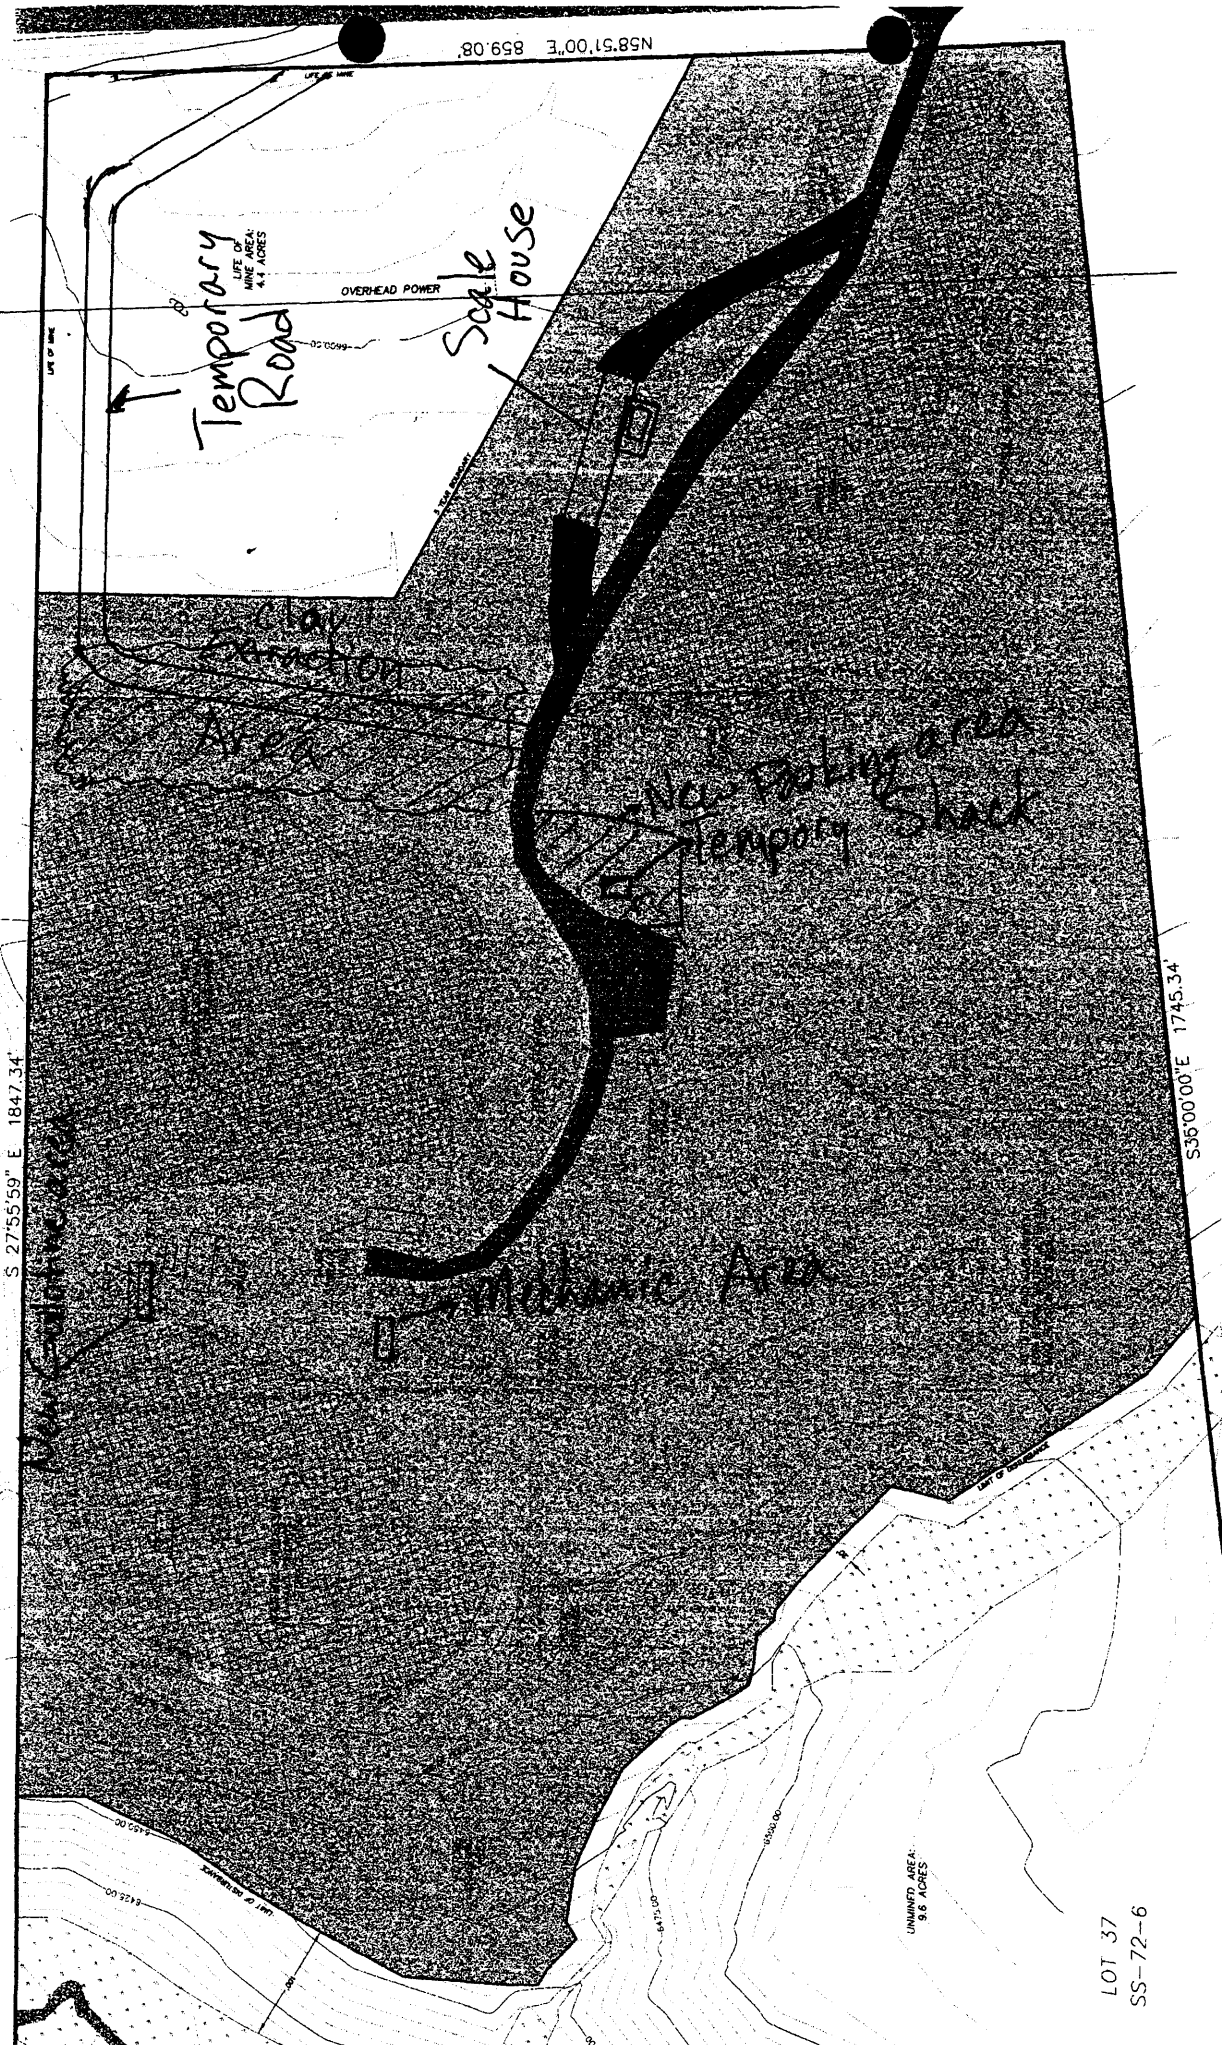

Robert John Hicken
President, Mountain Valley Stone, Inc.
